Scientist, Centre for Outcomes Research and Evaluation, Research Institute of the McGill University Health Centre

Can digital solutions plug health service delivery gaps for HIV/Sexually transmitted infections? Evidence from Canada, India and South Africa

The COVID-19 pandemic has catalyzed a digital transformation in health. A plethora of digital technologies are available, yet evidence of their effectiveness remains limited. In this talk, I will present evidence generated to support a greater use of digital solutions to improve health care access, patient & provider education, training/task shifting and patient empowerment to transform health service delivery. These use cases will hopefully make the case for a greater deployment and scale of low-cost solutions to improve health services across all global settings.
